EMERGENCY PUSH BUTTON AND CONTROL PANEL

GV-EP-C / EP1/ EP6

The Giant Voice® Emergency Push Button and Panel are custom build with push buttons, switches and pilot lights designed to suit our customer's requirements.

Emergency Push Button Panels are of great importance for the man-machine interface. They are mounted in switchboards and control panels as a supplement to the main control centre activation units. Manual actuation of the devices starts operating sequences and functional processes or serves to bring them to an end.
