## Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the router is used in a normal manner with a well-constructed network, the router should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Robustel accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the router, or for failure of the router to transmit or receive such data.

## Safety Precautions

### General

- The router generates radio frequency (RF) power. When using the router, care must be taken on safety issues related to RF interference as well as regulations of RF equipment.
- Do not use your router in aircraft, hospitals, petrol stations or in places where using cellular products is prohibited.
- Be sure that the router will not be interfering with nearby equipment. For example: pacemakers or medical equipment. The antenna of the router should be away from computers, office equipment, home appliance, etc.
- An external antenna must be connected to the router for proper operation. Only uses approved antenna with the router. Please contact authorized distributor on finding an approved antenna.
- Always keep the antenna with minimum safety distance of 20 cm or more from human body. Do not put the antenna inside metallic box, containers, etc.
- RF exposure statements
  1. For mobile devices without co-location (the transmitting antenna is installed or located more than 20cm away from the body of user and nearby person)
- FCC RF Radiation Exposure Statement
  1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
  2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and human body.

**Note:** Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Router may be used at this time.

### Using the Router in Vehicle

- Check for any regulation or law authorizing the use of cellular devices in vehicle in your country before installing the router.
- The driver or operator of any vehicle should not operate the router while driving.
- Install the router by qualified personnel. Consult your vehicle distributor for any possible interference of electronic parts by the router.
- The router should be connected to the vehicle's supply system by using a fuse-protected terminal in the vehicle's fuse box.
- Be careful when the router is powered by the vehicle's main battery. The battery may be drained after extended period.

## Protecting Your Router

To ensure error-free usage, please install and operate your router with care. Do remember the following:

- Do not expose the router to extreme conditions such as high humidity / rain, high temperature, direct sunlight, caustic / harsh chemicals, dust, or water.
- Do not try to disassemble or modify the router. There is no user serviceable part inside and the warranty would be void.
- Do not drop, hit or shake the router. Do not use the router under extreme vibrating conditions.
- Do not pull the antenna or power supply cable. Attach/detach by holding the connector.
- Connect the router only according to the instruction manual. Failure to do it will void the warranty.
- In case of problem, please contact authorized distributor.

## Regulatory and Type Approval Information

**Table 1:** Directives

2011/65/EU	The European RoHS2.0 2011/65/EU Directive was issued by the European parliament and the European Council on 1 July 2011 on the restriction of the use of certain Hazardous substances in electrical and electronic equipment.	
2012/19/EU	The European WEEE 2012/19/EU Directive was issued by the European parliament and the European Council on 24 July 2012 on waste electrical and electronic equipment.	
2013/56/EU	The European 2013/56/EU Directive is a battery Directive which published in the EU official gazette on 10 December 2013. The button battery used in this product conforms to the standard of 2013/56/EU directive.	

**Table 2:** Standards of the electronic industry of the People's Republic of China

SJ/T 11363-2006	<p>The electronic industry standard of the People's Republic of China SJ/T 11363-2006 "Requirements for Concentration Limits for Certain Toxic and Hazardous Substances in Electronic Information Products" issued by the ministry of information industry of the People's Republic of China on November 6, 2006, stipulates the maximum allowable concentration of toxic and hazardous substances in electronic information products.</p> <p>Please see <b>Table 3</b> for an overview of toxic or hazardous substances or elements that might be contained in product parts in concentrations above the limits defined by SJ/T 11363-2006.</p>
SJ/T 11364-2014	<p>The electronic industry standard of the People's Republic of China SJ/T 11364-2014 "Labeling Requirements for Restricted Use of Hazardous Substances in Electronic and Electrical Products" issued by the ministry of Industry and information technology of the People's Republic of China on July 9, 2014, stipulates the Labeling requirements of hazardous substances in electronic and electrical products, environmental protection use time limit and whether it can be recycled. This standard is applicable to electronic and electrical products sold within the territory of the People's Republic of China, and can also be used for reference in the logistics process of electronic and electrical products.</p> <p>The orange logo below is used for Robustel products:</p> <div style="text-align: right;">  </div> <p>Indicates its warning attribute, that is, some hazardous substances are contained in the product. The "10" in the middle of the legend refers to the environment-friendly Use Period (EFUP) * of electronic information product, which is 10 years. It can be used safely during the environment-friendly Use Period. After the environmental protection period of use, it should enter the recycling system.</p> <p>*The term of environmental protection use of electronic information products refers to the term during which the toxic and hazardous substances or elements contained in electronic information products will not be leaked or mutated and cause serious pollution to the environment or serious damage to people and property under normal conditions of use.</p>

**Table 3:** Toxic or Hazardous Substances or Elements with Defined Concentration Limits

Name of the Part	Hazardous Substances									
	(Pb)	(Hg)	(Cd)	(Cr(VI))	(PBB)	(PBDE)	(DEHP)	(BBP)	(DBP)	(DIBP)
Metal parts	o	o	o	o	–	–	–	–	–	–
Circuit modules	o	o	o	o	o	o	o	o	o	o
Cables and cable assemblies	o	o	o	o	o	o	o	o	o	o
Plastic and polymeric parts	o	o	o	o	o	o	o	o	o	o

o:  
Indicates that this toxic or hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement in RoHS2.0.

X:  
Indicates that this toxic or hazardous substance contained in at least one of the homogeneous materials for this part *might exceed* the limit requirement in RoHS2.0.

–:  
Indicates that it does not contain the toxic or hazardous substance.

## Document History

Updates between document versions are cumulative. Therefore, the latest document version contains all updates made to previous versions.

Date	Firmware Version	Document Version	Change Description
Dec. 18, 2019	3.1.1	v.1.0.0	Initial release
Dec. 31, 2019	3.1.1	v.1.0.1	Delete the "traffic limit switch card" button; Revised the SMS Remote Control; Remove extra spaces; Revised the WIFI AP section; Revised the description of Ethernet

# Chapter 1 Product Overview

## 1.1 Introduction

Robustel's R1510 router is a Dual Ethernet port (LAN + WAN) 3G/4G router with advanced software functions at a very competitive price point.

The R1510 has many unique software innovations including, but not limited to:

RobustVPN – innovative use of Open VPN tunneling to provide a fixed IP address on ANY SIM Card.

RCMS – Robustel's Cloud management platform – essential for managing an estate of routers – Basic version FREE.

Data Guard – critical 'failsafe' that stops unexpected data overusage within seconds of a threshold being breached.

Smart Reboot – essential backup solution for when your roaming SIM card doesn't roam!

## 1.2 Package Contents

Before installing your R1510 Router, verify the kit contents as following.

**Note:** Accessories are subject to the actual order. If you have any questions, please contact your sales representative.

- 1 x Robustel R1510 Industrial Cellular VPN Router

- 1 x 2-pin 3.5 mm male terminal block for power supply

- 1 x 3\*5-pin 3.5 mm male terminal block for DIDO

- 3G/4G SMA-J cellular antenna (Two as standard)  
Stubby antenna

- RP- SMA-J WIFI antenna  
Stubby antenna

- Ethernet cable

- 1 x SIM Card Sticker

**STICKER**

#### Optional Accessories (sold separately)

- AC/DC power adapter (12V DC, 1 A; EU/US/UK/AU plug optional)

- Wall mounting kit

- 35 mm DIN rail mounting kit

## 1.3 Specifications

### Cellular Interface

- Number of antennas: 2 external antenna(MAIN + AUX)
- Connector: SMA-K
- SIM: 1\* (3 V & 1.8 V) Standard SIM or eSIM

### Ethernet Interface

- Number of ports: 2 x 10/100 Mbps, 2 x LAN or 1 x LAN + 1 x Wan
- Magnet isolation protection: 1.5 KV

### WiFi Interface

- Number of antennas: 1 external antenna
- Connector: RP-SMA-K (external antenna)
- Standards: 802.11b/g/n, supports AP and Client modes
- Frequency bands: 2.4 GHz
- Security: WEP, WPA, WPA2
- Encryption: 64/128 AES, TKIP
- Data speed: 2\*2 MIMO, 300 Mbps

### DI/DO

- Type: 1 x DI (wet contact) + 1 x DO (wet contact)
- Connector: 3-pin 3.5 mm female socket
- Absolute maximum VDC:30V DC (DI/DO)
- Absolute maximum ADC: 20mA

### Others

- 1 x Reset button (RST button)

- LED indicators - 1 x RUN, 1 x MDM, 1 x USR, 1 x RSSI, 1 x WiFi
- Built-in: Watchdog, Timer

#### Power Supply and Consumption

- Connector: 2-pin 3.5 mm female socket
- Input voltage: 9 to 36V DC
- Power consumption: Idle: 100 mA@12 V; Data link: 500 mA (peak) @12 V

#### Physical Characteristics

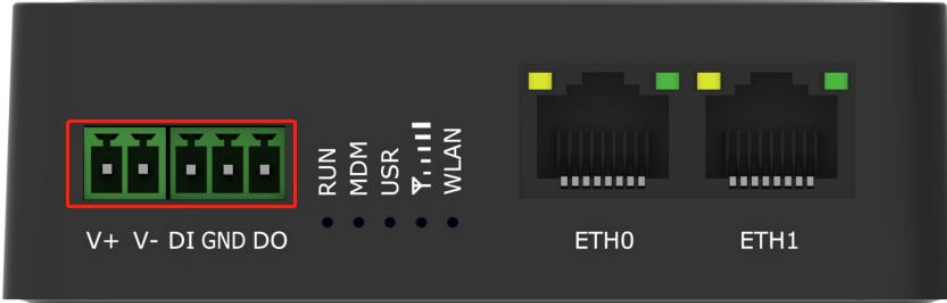

- Ingress protection: IP30
- Housing & Weight: Plastic, 150 g
- Dimensions: 91.5 x 91.5 x 31.5mm
- Installations: Desktop, wall mounting or DIN rail mounting (Wall mounting and Din rail mounting installation requires additional installation accessories)
- Operating Temperature: -25 to +70 °C
- Storage Temperature: -40 to +85 °C
- Relative Humidity: 5 to 95% RH

## 1.4 Dimensions

# Chapter 2 Hardware Installation

## 2.1 Pin Description

PIN	Power	DI/DO	Direction
1	V+	--	Router ← Device
2	V-	--	Router → Device
3	--	DI	Router ← Device
4	--	GND	Router → Device
5	--	DO	Router → Device

## 2.2 LED Indicators

Name	Color	Status	Description	
RUN	Green	On, solid	Router is powered on (System is initializing)	
		On, blinking	Router starts operating	
		Off	Router is powered off	
MDM	Green	On, solid	Link connection is working	
		On, blinking	Data is sent and received.	
		Off	Link connection is not working	
USR	USR-Open	Green	On, solid	OpenVPN connection is established

	VPN		Off	OpenVPN connection is not established
	USR-IPsec	Green	On, solid	IPsec connection is established
			Off	IPsec connection is not established
RSSI (Represented by five bars signal.)	Green	Green	On, solid	Signal level: Wireless module : 21-31 dB ( High Signal strength)
			On, blinking	Signal level: Wireless module : 11-20 dB ( Medium Signal strength)
			Off	Signal level: Wireless module : 1-10 dB ( Low Signal strength)
WiFi	Green	Green	On, solid	WiFi is enabled and working properly
			Off	WiFi is disabled or not working properly

**Note:** click Services > Advanced > system > System Settings > Custom LED light type to set the display type of USR LED.

## 2.3 Reset Button

Function	Operation
Reboot	Press and hold the RST button for 2 to 7 seconds under the operating status.
Restore to factory default settings	Wait for 0~20 seconds after powering up the router, press and hold the RST button until all five LEDs start blinking one by one, and release the button to return the router to factory defaults.

## 2.4 Ethernet Ports

There are two Ethernet ports on R1510, including ETH0 (WAN/LAN), and ETH1. Each has two LED indicators. The yellow one is a link indicator but the green one doesn't mean anything. For details about status, see the table below.

Indicator	Status	Description
Link indicator (Yellow)	On, solid	Connection is established
	On, blinking	Data is being transferred
	Off	Connection is not established

## 2.5 Insert or Remove SIM Card

Insert or remove the SIM card as shown in the following steps.

- **Insert SIM card**

1. Make sure router is powered off.
2. To insert SIM card, press the card with finger until you hear a click.
3. After the SIM card is inserted, attach the SIM card sticker to the card slot.

- **Remove SIM card**

1. Make sure router is powered off.
2. Tear the SIM card sticker from the slot.
3. To remove SIM card, press the card with finger until it pops out and then take out the card.

**Note:**

1. Use the specific M2M SIM card when the device is working in extreme temperature, because the regular card for long-time working in harsh environment will be disconnected frequently.
2. Do not touch the metal of the card surface in case information in the card will lose or be destroyed.

3. Do not bend or scratch the card.
4. Keep the card away from electricity and magnetism.
5. Make sure router is powered off before inserting or removing the card.

## 2.6 Attach External Antenna (SMA Type)

Attach an external SMA antenna to the router's antenna connector and twist tightly. Make sure the antenna is within the correct frequency range provided by the ISP and with 50 Ohm impedance.

**Note:** Recommended torque for tightening is 0.35 N.m.

## 2.7 Mount the Router

The router can be placed on a desktop or mounted to a wall or a 35 mm DIN rail.

### Two methods for mounting the router

1. Wall mounting (measured in mm)
  - Option 1

First, drill holes on the wall, the distance between the two holes is 60mm, then knock the expansion pipe into the wall with a rubber hammer, align the screw with the expansion pipe, insert the screw and reserve the corresponding length, and finally fix the product on the wall.

- Option 2  
Size of Wall mounted kit:

Use 3 pcs of M3 screws to mount the router on the wall mounting kit, and then use 2 pcs of M3 screws to mount the wall mounting kit on the wall.

2. DIN rail mounting (measured in mm)

Use 3 pcs of M3 screws to mount the router on the DIN rail, and then hang the DIN rail on the holder. You need to choose a standard holder.

## 2.8 Connect the Router to a Computer

Connect an standard Ethernet cable to the port marked ETH0~ETH1 at the front of the R1510 Router, and connect the other end of the cable to your computer.

## 2.9 Power Supply

### CONNECTING THE POWER CABLE

COLOR	POLARITY
RED	+
YELLOW	-

R1510 Router supports reverse polarity protection, but always refers to the figure above to connect the power adapter correctly. There are two cables associated with the power adapter. Following to the color of the head, connect the cable marked red to the positive pole through a terminal block, and connect the yellow one to the negative in the same way.

**Note:** The range of power voltage is 9 to 36V DC.

## Chapter 3 Initial Configuration

The router can be configured through your web browser that including IE 8.0 or above, Chrome and Firefox, etc. A web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 98/NT/2000/XP/Me/Vista/7/8, etc. It provides an easy and user-friendly interface for configuration. There are various ways to connect the router, either through an external repeater/hub or connect directly to your PC. However, make sure that your PC has an Ethernet interface properly installed prior to connecting the router. You must configure your PC to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. If you encounter any problems accessing the router web interface, it is advisable to uninstall your firewall program on your PC, as this tends to cause problems accessing the IP address of the router.

### 3.1 Configure the PC

There are two methods to get IP address for the PC. One is to obtain an IP address automatically from “Local Area Connection”, and another is to configure a static IP address manually within the same subnet of the router. Please refer to the steps below.

Here take **Windows 7** as example, and the configuration for windows system is similar.

1. Click **Start > Control Panel**, double-click **Network and Internet**, and then double-click **Network Connections**.

2. Click **Properties** in the window of **Local Area Connection Status**.

3. Choose **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

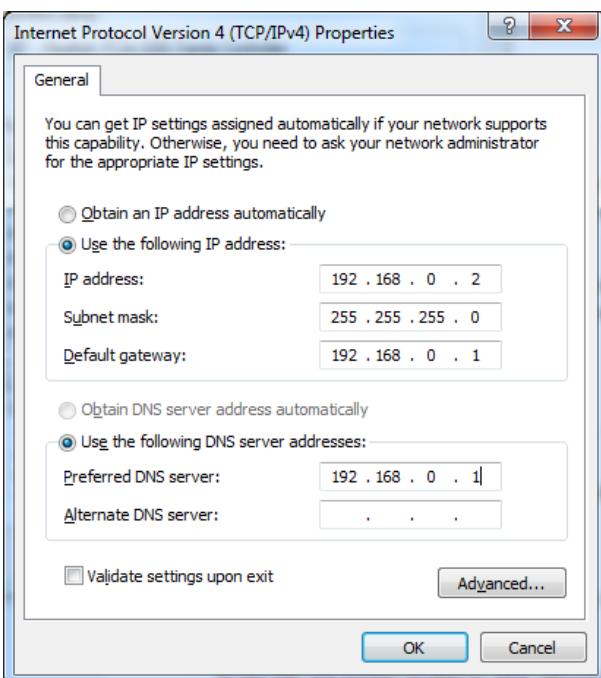

#### 4. Two ways for configuring the IP address of PC

Obtain an IP address from the DHCP server automatically; Click **"Obtain an IP address automatically"**;

#### Use the following IP address:

(Configured a static IP address manually within the same subnet of the router, click and configure **"Use the following IP address"**)

#### 5. Click **OK** to finish the configuration.

## 3.2 Factory Default Settings

Before configuring your router, you need to know the following default settings.

Item	Description
Username	admin
Password	admin
ETH0	WAN mode or 192.168.0.1/255.255.255.0, LAN mode
ETH1	192.168.0.1/255.255.255.0, LAN mode
DHCP Server	Enabled

## 3.3 Log in the Router

To log in to the management page and view the configuration status of your router, please follow the steps below.

1. On your PC, open a web browser such as Internet Explorer and Google, etc.
2. From your web browser, type the IP address of the router into the address bar and press enter. The default IP address of the router is <http://192.168.0.1/>, though the actual address may vary.

3. In the login page, enter the username and password, choose language and then click **LOGIN**. The default username and password are "admin".

**Note:** If enter the wrong username or password over six times, the login web will be locked for 5 minutes.

## 3.4 Control Panel

After logging in, the home page of the R1510 Router's web interface is displayed, for example.

In the home page, the user can save the configuration, restart the router, log out, and so on.

Using the original username and password to log in the router, the page will pop up the following tab.

It is strongly recommended for security purposes that you change the default username and/or password. Click the

**x** to close the popup. To change your username and/or password, see **4.6.6 User Management**.

Control Panel		
Item	Description	Button
Save & Apply	Click to save the current configuration into router's flash and apply the modification on every configuration page, to make the modification taking effect.	<b>Save &amp; Apply</b>
Reboot	Click to reboot the router.	<b>Reboot</b>
Logout	Click to log the current user out safely. After logging out, it will switch to login page. Shut down web page directly without logout, the next one can login web on this browser without a password before timeout.	<b>Logout</b>
Submit	Click to save the modification on current configuration page.	<b>Submit</b>

Cancel	Click to cancel the modification on current configuration page.	
--------	---	---

**Note:** The steps of how to modify configuration are as bellow:

1. Modify in one page;
2. Click  under this page;
3. Modify in another page;
4. Click  under this page;
5. Complete all modification;
6. Click .

## Chapter 4 Router Configuration

### 4.1 Status

#### 4.1.1 System Information

This section allows you to view the System Information of your Router.

^ System Information	
<b>Device Model</b>	R1510S
<b>System Uptime</b>	0 days, 00:03:51
<b>System Time</b>	Wed Dec 18 15:05:06 2019
<b>RAM Usage</b>	79M Free/128M Total
<b>Firmware Version</b>	3.1.1 (Rev 2923)
<b>Hardware Version</b>	1.0.1
<b>Kernel Version</b>	4.9.152
<b>Serial Number</b>	19012180040501

System Information	
Item	Description
Device Model	Show the model name of your device.
System Uptime	Show the current amount of time the router has been connected.
System Time	Show the current system time.
RAM Usage	Show the free memory and the total memory.
Firmware Version	Show the firmware version running on the router.
Hardware Version	Show the current hardware version.
Kernel Version	Show the current kernel version.
Serial Number	Show the serial number of your device, from which you can get information such as the router's time of delivery.

## 4.1.2 Internet Status

This section shows the Internet status information of your Router.

^ Internet Status	
<b>Active Link</b>	WWAN1
<b>Uptime</b>	0 days, 01:49:15
<b>IP Address</b>	10.153.192.56/255.255.255.240
<b>Gateway</b>	10.153.192.57
<b>DNS</b>	120.80.80.80 221.5.88.88

Internet Status	
Item	Description
Active Link	Show the current active link. WWAN1 or WAN。
Uptime	Show the current amount of time the link has been connected.
IP Address	Show the IP address of current link.
Gateway	Show the gateway address of the current link.
DNS	Show the current primary DNS server and secondary server.

## 4.1.3 LAN Status

This section shows the router's LAN status information.

^ LAN Status	
<b>IP Address</b>	192.168.0.1/255.255.255.0
<b>MAC Address</b>	34:FA:40:04:D1:B3

LAN Status	
Item	Description
IP Address	Show the IP address and the Netmask of the router.
MAC Address	Show the MAC address of the router.

## 4.2 Interface

### 4.2.1 Link Manager

This section allows you to setup the connection of Link Manager. Link manager is a network link backup function that provides mobile network and Ethernet link backups.

Link Manager
Status

^ General Settings

## 4.2.2 LAN

This section allows you to set the related parameters for LAN port. There are two LAN ports on R1510 Router, including ETH0, and ETH1. Wan is assigned as ETH0. The ETH0 and ETH1 can freely choose from lan0 and lan1, but at least one LAN port must be assigned as lan0. The default settings of ETH0 and ETH1 are lan0 and their default IP are 192.168.0.1/255.255.255.0.

### LAN

By default, there is a LAN port (lan0) in the list. To begin adding a new LAN port (lan1), please configure ETH1, ETH2 or ETH3 as lan1 first in **Ethernet > Ports > Port Settings**. Otherwise, the operation will be prompted as “List is full”.

LAN					Multiple IP	Status
^ Network Settings <span style="float: right;">?</span>						
Index	Interface	IP Address	Netmask	VLAN ID		
1	lan0	192.168.0.1	255.255.255.0	0	<span style="float: right;">+</span> <span style="float: right;">✎ ✕</span>	

**Note:** Lan0 cannot be deleted.

You may click **+** to add a new LAN port, or click **X** to delete the current LAN port. Now, click **✎** to edit the configuration of the LAN port.

### 4.2.3 Ethernet

This section allows you to set the related parameters for Ethernet. There are two Ethernet ports on R1510 Router, including ETH0 and ETH1. ETH0 can be configured as the WAN port for the router to access the outer network or the LAN port for the lower end devices to connect with the router. ETH1 can only be configured as a LAN port for the lower device to connect to the router. By default, ETH0 and ETH1 are lan0, and their IP are 192.168.0.1/255.255.255.0.

Ports			Status
^ Port Settings <span style="float: right;">?</span>			
Index	Port	Port Assignment

## 4.3 Network

### 4.3.1 Route

This section allows you to set the static route. Up to 20 static routes can be added to the router. Static route is a form of routing that occurs when a router uses a manually-configured routing entry, rather than information from a dynamic routing traffic. Route Information Protocol (RIP) is widely used in small network with stable use rate. Open Shortest Path First (OSPF) is made router within a single autonomous system and used in large network.

Click network > route > static route to enter the static route table, which allows users to manually add, remove, or modify static route rules.

## Static Route

Static Route		Status

Source Address	Defines if access is allowed from one or a range of IP addresses which are defined by Source IP Address, or every IP addresses.	Null
Filtering rule		
Index	Indicate the ordinal of the list.	--
Description	Enter a description for this filtering rule.	Null
Source Port	Specify an access originator and enter its source port.	Null
Source MAC	Enter the MAC address of the defined source IP address.	Null

Filtering		
Item	Description	Default
Target Address	Defines if access is allowed to one or a range of IP addresses which are defined by Target IP Address, or every IP addresses.	Null
Target Port	Enter the target port which the access originator wants to access.	Null
Protocol	Select from "All", "TCP", "UDP", "ICMP" or "TCP-UDP". <b>Note:</b> It is recommended that you choose "All" if you don't know which protocol of your application to use.	All
Action	Select from "Accept" or "Drop". <ul style="list-style-type: none"> <li>Accept: When Default Filtering Policy is drop, router will drop all the connecting requests except the hosts which fit this accept filtering list</li> <li>Drop: When Default Filtering Policy is accept, router will accept all the connecting requests except the hosts which fit this drop filtering list</li> </ul>	Drop

## Port Mapping

Port mapping is defined manually in the router, and the data received from some ports in the public network are all forwarded to a port of an IP in the internal network. Click "network > firewall > port map" to display as follows:

Filtering	Port Mapping	Custom Rules	DMZ	Status		
^ Port Mapping Rules						
Index	Description	Internet Port	Local IP	Local Port	Protocol	+

Click **+** to add port mapping rules. The maximum rule count is 40.

**Port Mapping**

^ Port Mapping Rules

Index:

Description:

Remote IP:  ?

Internet Port:  ?

Local IP:

Local Port:  ?

Protocol:  v

Port Mapping Rules		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Description	Enter a description for this port mapping.	Null

Port Mapping Rules		
Item	Description	Default
Remote IP	Specify the host or network which can access to the local IP address. Empty means unlimited. e.g. 10.10.10.10/255.255.255.255 or 192.168.1.0/24	Null
Internet Port	Set the internet port of router which can be accessed by other hosts from internet.	Null
Local IP	Enter router's LAN IP which will forward to the internet port of router.	Null
Local Port	Enter the port of router's LAN IP.	Null
Protocol	Select from "TCP", "UDP" or "TCP-UDP" as your application required.	TCP-UDP

## Custom Rules

"Custom Rules" meets customer's demand for personal filtering of IP package, filter data usage of a website for example. Users can add any iptables rules which meet the iptables rule format standard in this list.

Click **+** to add custom rules.

Custom firewall Rules		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Description	Enter a description for this custom rule.	Null
Rule	Specify one custom rule.	Null

## DMZ

The DMZ, also known as the Demilitarized Zone, is being transformed into a large swath of land. It is to solve the problem that the access user of the external network cannot access the internal network server after installing the firewall, and set up a buffer between the non-secure system and the secure system. A DMZ host is an Intranet host that has open access to all ports except the occupied and forwarded ports to the specified address.

Click "> firewall > DMZ" to display the following:

Filtering | Port Mapping | Custom Rules | **DMZ** | Status

**DMZ Settings**

Enable DMZ  ON  OFF

Host IP Address

Source IP Address  ?

DMZ Settings		
Item	Description	Default
Enable DMZ	Click the toggle button to enable/disable DMZ. DMZ host is a host on the internal network that has all ports exposed, except those ports otherwise forwarded.	OFF
Host IP Address	Enter the IP address of the DMZ host on your internal network.	Null
Source IP Address	Set the address which can talk to the DMZ host. 0.0.0.0 means for any addresses.	Null

## Status

This window allows you to view the status of chain input, chain forward and chain output.

Filtering | Port Mapping | Custom Rules | DMZ | **Status**

-------	---------	--------	----------	----	-----	--------	-------------

### 4.3.3 IP Passthrough

Click **Network > IP Passthrough > IP Passthrough** to enable or disable the IP Pass-through option.

If router enables the IP Pass-through, the terminal device (such as PC) will enable the DHCP Client mode and connect to LAN port of the router; and after the router dial up successfully, the PC will automatically obtain the IP address and DNS server address which assigned by ISP.

## 4.4 VPN

### 4.4.1 IPsec

This section allows you to set the IPsec and the related parameters. Internet Protocol Security (IPsec) is a protocol suite for secure Internet Protocol (IP) communications that works by authenticating and encrypting each IP packet of a communication session.

Click **VPN > IPsec > general** to set IPsec parameters.

#### General

General Settings @ General		
Item	Description	Default
Keepalive	Set the time to live in seconds. The router sends keep-alive packets to the NAT (Network Address Translation) server at regular intervals to prevent the records on the NAT table from disappearing.	20
Optimize DH Exponent size	Click the toggle button to enable/disable this option. When enabled, when using dhgroup17 or dhgroup18, it helps to shorten the time to generate the dh key.	OFF
Debug Enable	Click the toggle button to enable/disable this option. Enable for IPsec VPN	OFF

	information output to the debug port.	
--	---------------------------------------	--

IKE Settings		
Item	Description	Default
IKE Type	Select from "IKEv1" and "IKEv2".	IKEv1
Negotiation Mode	Select from "Main" and "Aggressive" for the IKE negotiation mode in phase 1. If the IP address of one end of an IPsec tunnel is obtained dynamically, the IKE negotiation mode must be aggressive. In this case, SAs can be established as long as the username and password are correct.	Main Mode
Encryption Algorithm	Select from "3DES", "AES128", "AES192" and "AES256" to be used in IKE negotiation. <ul style="list-style-type: none"> <li>3DES: Use 168-bit 3DES encryption algorithm in CBC mode</li> <li>AES128: Use 128-bit AES encryption algorithm in CBC mode</li> <li>AES192: Use 192-bit AES encryption algorithm in CBC mode</li> <li>AES256: Use 256-bit AES encryption algorithm in CBC mode</li> </ul>	3DES
Authentication Algorithm	Select from "MD5", "SHA1", "SHA2 256" or "SHA2 512" to be used in IKE negotiation.	SHA1
IKE DH Group	Select from "DHgroup1", "DHgroup2", "DHgroup5", "DHgroup14", "DHgroup15", "DHgroup16", "DHgroup17" or "DHgroup18" to be used in key negotiation phase 1.	DHgroup2
Authentication Type	Select from "PSK", "CA", "PKCS#12", "xAuth PSK" and "xAuth CA" to be used in IKE negotiation. <ul style="list-style-type: none"> <li>PSK: Pre-shared Key</li> <li>CA: x509 Certification Authority</li> <li>xAuth: Extended Authentication to AAA server</li> <li>PKCS#12: Exchange digital certificate authentication</li> </ul>	PSK
PSK Secret	Enter the pre-shared key.	Null
Local ID Type	Select from "Default", "FQDN" and "User FQDN" for IKE negotiation. <ul style="list-style-type: none"> <li>Default: Uses an IP address as the ID in IKE negotiation</li> <li>FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security</li> </ul>	Default

IKE Settings		
Item	Description	Default
	router, e.g., test.robustel.com <ul style="list-style-type: none"> <li>User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign “@” for the local security router, e.g., test@robustel.com</li> </ul>	
Remote ID Type	Select from “Default”, “FQDN” and “User FQDN” for IKE negotiation. <ul style="list-style-type: none"> <li>Default: Uses an IP address as the ID in IKE negotiation</li> <li>FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security router, e.g., test.robustel.com</li> <li>User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign “@” for the local security router, e.g., test@robustel.com</li> </ul>	Default
IKE Lifetime	Set the lifetime in IKE negotiation. Before an SA expires, IKE negotiates a new SA. As soon as the new SA is set up, it takes effect immediately and the old one will be cleared automatically when it expires.	86400
Private Key Password	Enter the private key under the “CA” and “xAuth CA” authentication types.	Null
Username	Enter the username used for the “xAuth PSK” and “xAuth CA” authentication types.	Null
Password	Enter the password used for the “xAuth PSK” and “xAuth CA” authentication types.	Null

If click **VPN > IPsec > Tunnel > General Settings**, and choose **ESP** as protocol. The specific parameter configuration is shown as below.

Enable Compression	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF	
Enable Forceencaps	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF	?
Expert Options		?

SA Settings		
Item	Description	Default
Encrypt Algorithm	Select from "3DES", "AES128", "AES192" or "AES256" when you select "ESP" in "Protocol". Higher security means more complex implementation and lower speed. DES is enough to meet general requirements. Use 3DES when high confidentiality and security are required.	3DES
Authentication Algorithm	Select from "MD5", "SHA1", "SHA2 256" or "SHA2 512" to be used in SA negotiation.	SHA1
PFS Group	Select from "PFS (N/A)", "DHgroup1", "DHgroup2", "DHgroup5", "DHgroup14", "DHgroup15", "DHgroup16", "DHgroup17" or "DHgroup18" to be used in SA negotiation.	DHgroup2
SA Lifetime	Set the IPsec SA lifetime. When negotiating to set up IPsec SAs, IKE uses the smaller one between the lifetime set locally and the lifetime proposed by the peer.	28800
DPD Interval	Set the interval after which DPD is triggered if no IPsec protected packets is received from the peer. DPD is a Dead peer detection. DPD irregularly detects dead IKE peers. When the local end sends an IPsec packet, DPD checks the time the last IPsec packet was received from the peer. If the time exceeds the DPD interval, it sends a DPD hello to the peer. If the local end receives no DPD acknowledgment within the DPD packet retransmission interval, it retransmits the DPD hello. If the local end still receives no DPD acknowledgment after having made the maximum number of retransmission attempts, it considers the peer already dead, and clears the IKE SA and the IPsec SAs based on the IKE SA.	30
DPD Failures	Set the timeout of DPD (Dead Peer Detection) packets.	180
Advanced Settings		
Enable Compression	Click the toggle button to enable/disable this option. Enable to compress the inner headers of IP packets.	OFF
Enable Forced Encapsulation	Click the switch button to enable/disable this option. When enabled, UDP encapsulation of esp packets is enforced even if NAT conditions are not	OFF

## 4.4.2 OpenVPN

This section allows you to set the OpenVPN and the related parameters. OpenVPN is an open-source software application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. Router supports point-to-point and point-to-points connections.

Click "**VPN > OpenVPN > OpenVPN**" to display as follows:

General Settings @ OpenVPN		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Enable	Click the toggle button to enable/disable this OpenVPN tunnel.	ON
Description	Enter a description for this OpenVPN tunnel.	Null
Mode	Select from "P2P" or "Client".	P2P
TLS Mode	Select from "None", "Client" or "server".	None
Protocol	Select from "UDP", "TCP-Client" or "TCP-Server".	UDP
Peer Address	Enter the end-to-end IP address or the domain of the remote OpenVPN server.	Null
Peer Port	Enter the end-to-end listener port or the listener port of the OpenVPN server.	1194
Listen Address	Enter the Listen address	Null
Listen Port	Enter the Listen port	1194
Interface Type	Select from "TUN", "TAP" which are two different kinds of device interface for OpenVPN. The difference between TUN and TAP device is that a TUN device is a point-to-point virtual device on network while a TAP device is a virtual device on Ethernet.	TUN
Authentication Type	Select from "None", "Preshared", "Password", "X509CA" and "X509CA Password". <b>Note:</b> "None" and "Preshared" authentication type are only working with P2P mode.	None
Enable IP address pool	Click the toggle button to enable/disable the IP address pool allocation function.	OFF
Initial address	Define the IP address pool start to assign addresses to OpenVPN clients.	10.8.0.5
End address	Defines the end of the IP address pool that assigns addresses to OpenVPN clients.	10.8.0.254
Client network	Enter the IP of Client network.	10.8.0.0
Client network mask	Enter the Client network mask.	255.255.255.0
Local IP	Enter the local virtual IP.	10.8.0.1
Remote IP	Enter the remote virtual IP.	10.8.0.2
Username	Enter the username used for "Password" or "X509CA Password" authentication type.	Null
Password	Enter the password used for "Password" or "X509CA Password" authentication type.	Null
Encrypt Algorithm	Select from "BF", "DES", "DES-EDE3", "AES128", "AES192" and "AES256". <ul style="list-style-type: none"> <li>BF: Use 128-bit BF encryption algorithm in CBC mode</li> <li>DES: Use 64-bit DES encryption algorithm in CBC mode</li> <li>DES-EDE3: Use 192-bit 3DES encryption algorithm in CBC mode</li> <li>AES128: Use 128-bit AES encryption algorithm in CBC mode</li> <li>AES192: Use 192-bit AES encryption algorithm in CBC mode</li> <li>AES256: Use 256-bit AES encryption algorithm in CBC mode</li> </ul>	BF
Renegotiation Interval	Set the renegotiation interval. If connection failed, OpenVPN will renegotiate when the renegotiation interval reached.	86400

General Settings @ OpenVPN		
Item	Description	Default
Max number of clients	Set the maximum number of clients allowed to access the OpenVPN server.	10
Keepalive Interval	Set keepalive (ping) interval to check if the tunnel is active.	20
Keepalive Timeout	Set the keepalive timeout. Trigger OpenVPN restart after n seconds pass without reception of a ping or other packet from remote.	120
MTU	Set the maximum transmission unit.	1500
Data fragmentation	Set the maximum frame length.	Null
Private Key Password	Enter the private key password under the "X509CA" and "X509CA Password" authentication type.	Null
Enable Compression	Click the toggle button to enable/disable this option. Enable to compress the data stream of the header.	ON
Enable default gateway	Click the toggle button to enable/disable the default gateway function. After being enabled, the local tunnel address is pushed as the default gateway of the peer device.	OFF
Enable NAT	Click the toggle button to enable/disable the NAT option. When enabled, the source IP address of host behind router will be disguised before accessing the remote OpenVPN client.	OFF
Receive DNS push	Click the toggle button to enable/disable receiving DNS push. After being enabled, it is allowed to receive DNS information pushed by the peer.	OFF
Verbose Level	Select the level of the output log and values from 0 to 11. <ul style="list-style-type: none"> <li>0: No output except fatal errors</li> <li>1~4: Normal usage range</li> <li>5: Output R and W characters to the console for each packet read and write</li> <li>6~11: Debug info range</li> </ul>	0
Advanced Settings @ OpenVPN		
Enable HMAC Firewall	Click the toggle button to enable/disable this option. Add an additional layer of HMAC authentication on top of the TLS control channel to protect against DoS attacks.	OFF
Enable PKCS#12	Click the toggle button to enable/disable the PKCS#12 certificate. It is an exchange of digital certificate encryption standard, used to describe personal identity information.	OFF
Enable nsCertType	Click the toggle button to enable/disable nsCertType. Require that peer certificate was signed with an explicit nsCertType designation of "server".	OFF
Enable Crl	Click the toggle button to enable/disable the Crl. Once enabled, the client certificate can be revoked.	OFF
Enable client to client	Click the toggle button to enable/disable this option. When enabled, clients can communicate with each other.	OFF

General Settings @ OpenVPN		
Item	Description	Default
Enable Dup Client	Click the toggle button to enable/disable the Dup Client. After being enabled, the tunnel IPs obtained by multiple clients are different, and the tunnel IP of the client is interconnected with the tunnel IP of the server.	OFF
Enable IP address retention	Click the toggle button to enable/disable this option. When enabled, the IP in the address pool is automatically obtained.	ON
Expert Options	Enter some other options of OpenVPN in this field. Each expression can be separated by a ‘;’.	Null
Advanced Settings @User password management		
Username	Enter the username for Custom tunnel connection username.	Null
Password	Enter the password for Custom tunnel connection password.	Null
General Settings @ Client management		
Enable	Click the toggle button to enable/disable this option. After being enabled, the Client IP address can be managed.	OFF
Common Name	Click the toggle button to set the certificate name.	Null
Client IP address	Click the toggle button to set a fixed allocation client virtual IP.	Null
Router	Set the Client terminal network.	Null
Push the router	Set the Sever terminal network.	Null

## Status

Enable STARTTLS	Click the toggle button to enable/disable STARTTLS encryption.	OFF
Outgoing server	Enter the SMTP server IP Address or domain name.	Null
Server port	Enter the SMTP server port.	25
Timeout	Set the max time for sending email to SMTP server. When the server doesn't receive the email over this time, it will try to resend.	10
Auth Login	If the mail server supports AUTH login, you must enable this button and set the username and password.	OFF
Username	Enter the username which has been registered from SMTP server.	OFF
Password	Enter the password of the username above.	Null
From	Enter the source address of the email.	Null
Subject	Enter the subject of this email.	Null

### 4.5.6 DDNS

This section allows you to set the DDNS parameters. The Dynamic DNS function allows you to alias a dynamic IP address to a static domain name, allows you whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP. The service provider defaults to “DynDNS”, as shown below.

Click **Service > DDNS** to set the parameters related to DDNS. The service provider defaults to DynDNS.

The screenshot shows the DDNS Settings window. At the top, there are tabs for 'DDNS' and 'Status'. Below the tabs is a header 'DDNS Settings'. The 'Enable' toggle is set to 'OFF'. The 'Service Provider' dropdown menu is highlighted with a red box and shows 'DynDNS' selected. Below it are input fields for 'Hostname', 'Username', and 'Password'.

When service provider chose “Custom”, the window is displayed as below.

The screenshot shows the DDNS Settings window with 'Custom' selected in the 'Service Provider' dropdown menu, which is highlighted with a red box. Below it is an input field for 'URL'. The 'Enable' toggle is still set to 'OFF'.

DDNS Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the DDNS option.	OFF
Service Provider	Select the DDNS service from “DynDNS”, “NO-IP”, “3322” or “Custom”. <b>Note:</b> the DDNS service only can be used after registered by Corresponding service provider.	DynDNS
Hostname	Enter the hostname provided by the DDNS server.	Null
Username	Enter the username provided by the DDNS server.	Null
Password	Enter the password provided by the DDNS server.	Null
URL	Enter the URL customized by user.	Null

Click “Status” bar to view the status of the DDNS.

DDNS Status	
Item	Description
Status	Display the current status of the DDNS.
Last Update Time	Display the date and time for the DDNS was last updated successfully.

## 4.5.7 SSH

Router supports SSH password access and secret-key access.

SSH Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable this option. When enabled, you can access the router via SSH.	ON
Port	Set the port of the SSH access.	22
Disable Password Logins	Click the toggle button to enable/disable this option. When enabled, you	OFF

	cannot use username and password to access the router via SSH. In this case, only the key can be used for login.

HTTP Port

?

HTTPS Port

?

General Settings @ Web Server		
Item	Description	Default
HTTP Port	Enter the HTTP port number you want to change in router’s Web Server. On a Web server, port 80 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTP Port number except 80, only adding that port number then you can login router’s Web Server.	80
HTTPS Port	Enter the HTTPS port number you want to change in router’s Web Server. On a Web server, port 443 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTPS Port number except 443, only adding that port number then you can login router’s Web Server.  <b>Note:</b> HTTPS is more secure than HTTP. In many cases, clients may be exchanging confidential information with a server, which needs to be secured in order to prevent unauthorized access. For this reason, HTTP was developed by Netscape corporation to allow authorization and secured transactions.	443

This section allows you to import the certificate file into the router.

Web Server | Certificate Management

^ Import Certificate

Import Type: CA

HTTPS Certificate: Choose File No file chosen Import

Import Certificate		
Item	Description	Default

## 4.6.6 User Management

This section allows you to change your username and password, and create or manage user accounts. One router has only one super user who has the highest authority to modify, add and manage other common users.

**Note:** Your new password must be more than 5 character and less than 32 characters and may contain numbers, upper and lowercase letters, and standard symbols.

The screenshot shows the 'Super User Settings' form. At the top, there are two tabs: 'Super User' and 'Common User', with 'Common User' selected. Below the tabs is a header for 'Super User Settings' with a help icon. The form contains four input fields: 'New Username', 'Old Password', 'New Password', and 'Confirm Password', each with a help icon to its right.

Super User Settings		
Item	Description	Default
New Username	Enter a new username you want to create, If you do not want to change username, leave it blank. 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
Old Password	Enter the old password of your router. The default is "admin", 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
New Password	Enter a new password you want to create, 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
Confirm Password	Enter the new password again to confirm.	Null

The screenshot shows the 'Common User Settings' section. At the top, there are two tabs: 'Super User' and 'Common User', with 'Common User' selected. Below the tabs is a header for 'Common User Settings' with a help icon. Underneath is a table with columns 'Index', 'Role', and 'Username'. A '+' button is located at the bottom right of the table.

Click **+** button to add a new common user. The maximum rule count is 5.

The screenshot shows the 'Common Users Settings' form. At the top, there are two tabs: 'Super User' and 'Common User', with 'Common User' selected. Below the tabs is a header for 'Common Users Settings' with a help icon. The form contains four input fields: 'Index' (with value 1), 'Role' (with dropdown menu showing 'Visitor'), 'Username', and 'Password', each with a help icon to its right.

Common User Settings		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Role	Select from "Visitor" and "Editor". <ul style="list-style-type: none"><li>• Visitor: Users only can view the configuration of router under this level</li><li>• Editor: Users can view and set the configuration of router under this level</li></ul>	Visitor
Username	Set the Username, 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
Password	Set the password, 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null

## Chapter 5 Configuration Examples

### 5.1 Cellular

#### 5.1.1 Cellular Dial-Up

This section shows you how to configure the primary and backup SIM card for Cellular Dial-up. Connect the router correctly and insert two SIM, then open the configuration page. Under the homepage menu, click **Interface > Link Manager > Link Manager > General Settings**, choose “WWAN1” as the primary link and “None” as the backup link, then click “Submit”.

**Link Manager** | **Status**

**^ General Settings**

Primary Link: WWAN1

Backup Link: None

Emergency Reboot:

**^ Link Settings**

When finished, click **Submit** > **Save & Apply** for the configuration to take effect.

## 5.1.2 SMS Remote Control

The router supports remote control via SMS. You can use following commands to get the status of the router, and set all the parameters.

There are three authentication types for SMS control. You can select from "Password", "Phonenum" or "Both".

**An SMS command has the following structure:**

1. Password mode—**Username:Password;cmd1;cmd2;cmd3;...cmdn** (available for every phone number).
2. Phonenum mode-- **Password;cmd1;cmd2;cmd3;... cmdn** (available when the SMS was sent from the phone number which had been added in R1510's phone group).
3. Both mode-- **Username:Password;cmd1;cmd2;cmd3;...cmdn** (available when the SMS was sent from the phone number).

**Note: All command symbols must be entered in the English input half angle mode.**

**SMS command Explanation:**

1. Password: The SMS control password defaults to the login password of the super user or the login password of the ordinary user who has read and write permissions.
2. **cmd1,cmd2,cmd3 to Cmdn**, the command format is the same as the CLI command, more details about CLI cmd please refer to **Chapter 6 Introductions for CLI**.

**Note:** Download the configure XML file from the configured web browser. The format of SMS control command can refer to the data of the XML file.

Go to **System** > **Profile** > **Export Configuration File**, Select export type as "complete", click **Generate** to generate the XML file and click **Export** to export the XML file.

```
<lan>
<network max_entry_num="2">
<id>1</id>
<interface>lan0</interface>
<ip>172.16.24.24</ip>
<netmask>255.255.0.0</netmask>
<mtu>1500</mtu>
```

**SMS cmd:**

```
set lan network 1 interface lan0
set lan network 1 ip 172.16.24.24
set lan network 1 netmask 255.255.0.0
set lan network 1 mtu 1500
```

3. The semicolon character (;) is used to separate more than one command packed in a single SMS.
4. E.g.

**Password mode—admin:admin;status system**

In this command, username is “admin”, password is “admin”, The control command is status system, and the function of the command is to get the system status.

**SMS received:**

```
firmware_version = 3.1.0
firmware_version_full = "3.1.0 (Rev 2781)"
hardware_version = 1.0.2
kernel_version = 4.9.152
device_model = R1510-4L
serial_number = 04870119080031
uptime = "0 days, 00:25:13"
system_time = "Wed Sep 11 13:48:40 2019"
```

```
ram_usage = "76M Free/128M Total"
```

**admin:admin;reboot**

In this command, username is "admin", password is "admin", and the command is to reboot the R1510 Router.

**SMS received:**

OK

**admin:admin;set firewall remote\_ssh\_access false;set firewall remote\_telnet\_access false**

In this command, username is "admin", password is "admin", and the command is to disable the remote\_ssh and remote\_telnet access.

**SMS received:**

OK

OK

**admin:admin;set lan network 1 interface lan0;set lan network 1 ip 172.16.24.24;set lan network 1 netmask 255.255.0.0;set lan network 1 mtu 1500**

In this command, username is "admin", password is "admin", and the commands is to configure the LAN parameter.

**SMS received:**

OK

OK

OK

OK

## 5.2 VPN Configuration Example

### 5.2.1 IPsec VPN

IPsec VPN sample topology (configuration of lke and SA parameters of server and client must be consistent):

## IPsec VPN\_Server:

### Cisco 2811:

```

## 5.2.2 OpenVPN

OpenVPN supports two modes, including Client and P2P. Here takes P2P as an example.

The configuration of two points is as follows.

### OpenVPN\_Server:

Generate relevant OpenVPN certificate on the server side firstly, and refer to the following commands to configuration the Server:

```
local 202.96.1.100
mode server
port 1194
proto udp
dev tun
tun-mtu 1500
fragment 1500
ca ca.crt
cert Server01.crt
key Server01.key
dh dh1024.pem
server 10.8.0.0 255.255.255.0
ifconfig-pool-persist ipp.txt
push "route 192.168.3.0 255.255.255.0"
client-config-dir ccd
route 192.168.1.0 255.255.255.0
keepalive 10 120
cipher BF-CBC
comp-lzo
max-clients 100
persist-key
persist-tun
status openvpn-status.log
verb 3
```

**Note:** For more configuration details, please contact your technical support engineer.

## OpenVPN\_Client:

Click **VPN > OpenVPN > OpenVPN** as below.

OpenVPN	Status	x509								
^ Tunnel Settings <table border="1"> <thead> <tr> <th>Index</th> <th>Enable</th> <th>Description</th> <th>Mode</th> <th>Protocol</th> <th>Peer Address</th> <th>Interface Type</th> <th>+</th> </tr> </thead> </table>			Index	Enable	Description	Mode	Protocol	Peer Address	Interface Type	+
Index	Enable	Description	Mode	Protocol	Peer Address	Interface Type	+			

Click **+** to configure the Client01 as below.

### ^ General Settings

**Index**

**Enable**  ON  OFF

When finished, click **Submit > Save & Apply** for the configuration to take effect.

### 5.2.3 GRE VPN

GRE VPN example topology:

The configuration of two points is as follows.

#### GRE-1:

The window is displayed as below by clicking **VPN > GRE > GRE**.

Click **+** button and set the parameters of GRE-1 as below.

When finished, click **Submit > Save & Apply** for the configuration to take effect.

### GRE-2:

Click **+** button and set the parameters of GRE-2 as below.

**^ Tunnel Settings**

Index: 1

Enable:  ON  OFF

Description: GRE-2

Remote IP Address: 58.1.1.1

Local Virtual IP Address: 10.8.0.2

Local Virtual Netmask: 255.255.255.0

Remote Virtual IP Address: 10.8.0.1

Enable Default Route:  ON  OFF

Enable NAT:  ON  OFF

Secrets: \*\*\*\*\*

Link Binding: Unspecified

When finished, click **Submit > Save & Apply** for the configuration to take effect.

The comparison between GRE-1 and GRE-2 is as below.

**GRE-1**

Index: 1

Enable:  ON  OFF

Description: GRE-1

Remote IP Address: 59.1.1.1

Local Virtual IP Address: 10.8.0.1

Local Virtual Netmask: 255.255.255.0

Remote Virtual IP Address: 10.8.0.2

Enable Default Route:  ON  OFF

Enable NAT:  ON  OFF

Secrets: \*\*\*\*\*

Link Binding: Unspecified

**GRE-2**

Index: 1

Enable:  ON  OFF

Description: GRE-2

Remote IP Address: 58.1.1.1

Local Virtual IP Address: 10.8.0.2

Local Virtual Netmask: 255.255.255.0

Remote Virtual IP Address: 10.8.0.1

Enable Default Route:  ON  OFF

Enable NAT:  ON  OFF

Secrets: \*\*\*\*\*

Link Binding: Unspecified

GRE-1 real public network IP address

GRE-2 real public network IP address

GRE-1 real tunnel IP address

GRE-2 real tunnel IP address

GRE-1 real tunnel IP address

GRE-2 real tunnel IP address

USE the same password for GRE-1 and GRE-2

USE the same password for GRE-1 and GRE-2

## Chapter 6 Introductions for CLI

### 6.1 What Is CLI

The Command Line Interface (CLI) is a set of software interfaces that provide another way to configure device parameters. Users can connect to the router through SSH or telnet to configure CLI commands. After establishing a Telnet or SSH connection with the router, enter the login account and password (default admin/admin) to enter the router's configuration mode, as shown below.

```
router login: admin
Password:
#
!           Comments
add        Add a list entry of configuration
clear      Clear statistics
config     Configuration operation
debug      Output debug information to the console
del        Delete a list entry of configuration
exit       Exit from the CLI
help       Display an overview of the CLI syntax
ovpn_cert_get Download openVPN certificate file via http or ftp
ping       Send messages to network hosts
reboot     Halt and perform a cold restart
set        Set system configuration
show       Show system configuration
status     Show running system information
tftpupdate Update firmware or configuration file using tftp
traceroute Print the route packets trace to network host
trigger    Trigger action
urlupdate  Update firmware via http or ftp
ver        Show version of firmware

#
```

#### Router login:

Router login: admin

Password: admin

#

#### CLI commands:

# ? (**Note:** the '?' won't display on the page.)

```
!           Comments
add        Add a list entry of configuration
clear      Clear statistics
config     Configuration operation
debug      Output debug information to the console
del        Delete a list entry of configuration
exit       Exit from the CLI
help       Display an overview of the CLI syntax
```

---

ping	Send messages to network hosts
reboot	Halt and perform a cold restart
route	Static route modify dynamically, this setting will not be saved
set	Set system configuration
show	Show system configuration
status	Show running system information
tftpupdate	Update firmware using tftp
tracert	Print the route packets trace to network host
urlupdate	Update firmware using http or ftp
ver	Show version of firmware

## 6.2 How to Configure the CLI

Following is a table about the description of help and the error should be encountered in the configuring program.

Commands /tips	Description
?	<p>Typing a question mark “?” will show you the help information.</p> <p>Example:</p> <pre># config (Tick ‘?’) config Configuration operation</pre> <p># config (Tick the space key+’?’)</p> <pre>commit Save the configuration changes and take effect changed configuration save_and_apply Save the configuration changes and take effect changed configuration loaddefault Restore Factory Configuration</pre>
Ctrl+c	Tick these two keys at the same time, except its “copy” function but also can be used for “break” out of the setting program.
Syntax error: The command is not completed	Command is not completed.
Tick space key+ Tab key	<p>It can help you finish your currently incomplete commands.</p> <p>Example:</p> <pre># config (tick Enter key) Syntax error: The command is not completed</pre> <pre># config (tick space key+ Tab key) commit save_and_apply loaddefault</pre>
# config save_and_apply / #config commit	<p>When your setting finished, you should enter those commands to make your setting take effect on the device.</p> <p><b>Note:</b> Commit and save_and_apply plays the same role.</p>

## 6.3 Commands Reference

Commands	Syntax	Description
Debug	<i>Debug parameters</i>	enable on or disable the debug function
Show	<i>Show parameters</i>	Show current configuration of each function
Set	<i>Set parameters</i>	All the function parameters are set by commands set and add, the difference is that set is for the single parameter and add is for the list parameter
Add	<i>Add parameters</i>	

**Note:** More detail about CLI command, please refer to “Command Line Interface Guide”.

## 6.4 Quick Start with Configuration ExampleS

The best and quickest way to master CLI is firstly to view all features from the webpage and then read all CLI commands at a time, finally learn to configure it with some reference examples.

### Example 1: Show current version

```
# status system
firmware_version = 3.1.0
firmware_version_full = "3.1.0 (Rev 2781)"
hardware_version = 1.0.1
kernel_version = 4.9.152
device_model = R1510S
serial_number = 04870119080026
uptime = "0 days, 00:45:43"
system_time = "Sun Jan  1 00:45:21 2017 (NTP not updated)"
ram_usage = "78M Free/128M Total"
```

### Example 2: Update firmware via tftp

```
# tftpupdate (space+?)
firmware  New firmware
config    New configuration file
# tftpupdate firmware (space+?)
filename  New file
# tftpupdate firmware filename R1510-firmware-sysupgrade-unknown.ruf host 192.168.100.99 // enter a new
firmware name
Downloading
Download success.
Upgrading
Upgrade success.          //update success
# reboot                  //make you configuration effect after reboot
Rebooting...
OK
```

### Example 3: Set link-manager

```
# set
# set (space+?)
cellular      Cellular
ddns          DDNS
dido          DIDO
email         Email
```

ethernet	Ethernet
event	Event Management
firewall	Firewall
gre	GRE
ip_passthrough	IP Passthrough
ipsec	IPSec
lan	Local Area Network
link_manager	Link Manager
ntp	NTP
openvpn	OpenVPN
reboot	Automatic Reboot
route	Route
sms	SMS
ssh	SSH
syslog	Syslog
system	System
user_management	User Management
web_server	Web Server
wifi	WiFi AP

```
# set link_manager (space+?)
```

primary_link	Primary Link
backup_link	Backup Link
backup_mode	BackSup Mode
revert_interval	Revert Interval
emergency_reboot	Emergency Reboot
link	Link Settings

```
# set link_manager primary_link (space+?)
```

```
Enum Primary Link (wwan1/wan/wlan)
```

```
# set link_manager primary_link wwan1
```

```
//select "wwan1" as primary link
```

```
OK
```

```
//setting succeed
```

```
#set link_manager link 1 (space+?)
```

type	Type
desc	Description
connection_type	Connection Type
wwan	WWAN Settings
static_addr	Static Address Settings
pppoe	PPPoE Settings
ping	Ping Settings
nat_enable	NAT Enable
mtu	MTU
weight	Weight
upload_bandwidth	Upload Bandwidth
download_bandwidth	Download Bandwidth
dns1_overrided	Overrided Primary DNS
dns2_overrided	Overrided Secondary DNS

```

debug_enable          Debug Enable
verbose_debug_enable  Verbose Debug Enable
# set link_manager link 1 type wwan1
OK
# set link_manager link 1 wwan (space+?)
auto_apn              Automatic APN Selection
apn                   APN
username              Username
password              Password
dialup_number         Dialup Number
auth_type             Authentication Type
data_allowance        Data Allowance
billing_day           Billing Day
# set link_manager link 1 wwan data_allowance 100           //open cellular switch_by_data_traffic
OK                                                         //setting succeed
# set link_manager link 1 wwan billing_day 1               //setting specifies the day of month for billing
OK                                                         //setting succeed
...
# config save_and_apply
OK                                                         //save and apply current configuration, make you configuration effect

```

#### Example 4: Set Ethernet

```

# set Ethernet port_setting 2 port_assignment lan0         //Set Table 2 (eth1) to lan0
OK
# config save_and_apply                                   //save and apply current configuration, make you configuration effect
OK

```

#### Example 5: Set LAN IP address

```

# show lan all
network {
    id = 1
    interface = lan0
    ip = 192.168.0.1
    netmask = 255.255.255.0
    mtu = 1500
    dhcp {
        enable = true
        mode = server
        relay_server = ""
        pool_start = 192.168.0.2
        pool_end = 192.168.0.100
    }
}

```

```

    netmask = 255.255.255.0
    gateway = ""
    primary_dns = ""
    secondary_dns = ""
    wins_server = ""
    lease_time = 120
    static_lease = ""
    expert_options = ""
    debug_enable = false
}
vlan_id = 0
}
#
# set lan
network      Network Settings
multi_ip     Multiple IP Address Settings
vlan         VLAN
# set lan network 1(space+?)
interface    Interface
ip           IP Address
netmask      Netmask
mtu          MTU
dhcp         DHCP Settings
Vlan_id      VLAN ID
# set lan network 1 interface lan0
OK
# set lan network 1 ip 172.16.24.24           // set IP address for lan
OK                                           // setting succeed
# set lan network 1 netmask 255.255.0.0
OK
#
...
# config save_and_apply
OK                                           // save and apply current configuration, make you configuration effect

```

## Example 6: CLI for setting Cellular

```

# show cellular all
sim {
    id = 1
    card = sim1
    phone_number = ""
    pin_code = ""
    extra_at_cmd = ""
    telnet_port = 0
}

```

```
network_type = auto
band_select_type = all
band_settings {
    gsm_850 = false
    gsm_900 = false
    gsm_1800 = false
    gsm_1900 = false
    wcdma_800 = false
    wcdma_850 = false
    wcdma_900 = false
    wcdma_1900 = false

# Glossary

Abbr.	Description
AC	Alternating Current
APN	Access Point Name of GPRS Service Provider Network
ASCII	American Standard Code for Information Interchange
CE	Conformité Européene (European Conformity)
CHAP	Challenge Handshake Authentication Protocol
CLI	Command Line Interface for batch scripting
CSD	Circuit Switched Data
CTS	Clear to Send
dB	Decibel
dBi	Decibel Relative to an Isotropic radiator
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment (typically modems)
DCS 1800	Digital Cellular System, also referred to as PCN
DI	Digital Input
DO	Digital Output
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi-frequency
DTR	Data Terminal Ready
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
EMC	Electromagnetic Compatibility
EMI	Electro-Magnetic Interference
ESD	Electrostatic Discharges
ETSI	European Telecommunications Standards Institute
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
FDD LTE	Frequency Division Duplexing Long Term Evolution
GND	Ground
GPRS	General Packet Radio Service
GRE	generic route encapsulation
GSM	Global System for Mobile Communications
HSPA	High Speed Packet Access
ID	identification data
IMEI	International Mobile Equipment Identification
IP	Internet Protocol
IPSec	Internet Protocol Security
kbps	kbits per second
L2TP	Layer 2 Tunneling Protocol

Abbr.	Description
LAN	local area network
LED	Light Emitting Diode
M2M	Machine to Machine
MAX	Maximum
Min	Minimum
MO	Mobile Originated
MS	Mobile Station
MT	Mobile Terminated
OpenVPN	Open Virtual Private Network
PAP	Password Authentication Protocol
PC	Personal Computer
PCN	Personal Communications Network, also referred to as DCS 1800
PCS	Personal Communication System, also referred to as GSM 1900
PDU	Protocol Data Unit
PIN	Personal Identity Number
PLCs	Program Logic Control System
PPP	Point-to-point Protocol
PPTP	Point to Point Tunneling Protocol
PSU	Power Supply Unit
PUK	Personal Unblocking Key
R&TTE	Radio and Telecommunication Terminal Equipment
RF	Radio Frequency
RTS	Request to Send
RTU	Remote Terminal Unit
Rx	Receive Direction
SDK	Software Development Kit
SIM	subscriber identification module
SMA antenna	Stubby antenna or Magnet antenna
SMS	Short Message Service
SNMP	Simple Network Management Protocol
TCP/IP	Transmission Control Protocol / Internet Protocol
TE	Terminal Equipment, also referred to as DTE
Tx	Transmit Direction
UART	Universal Asynchronous Receiver-transmitter
UMTS	Universal Mobile Telecommunications System
USB	Universal Serial Bus
USSD	Unstructured Supplementary Service Data
VDC	Volts Direct Current
VLAN	Virtual Local Area Network
VPN	Virtual Private Network
VSWR	Voltage Stationary Wave Ratio

---

Abbr.	Description
WAN	Wide Area Network
